Thousands of reliable Sundyne LMV-801 pumps are still installed and running today.

Sundyne's 801 conversion kit supplies everything needed to turn your existing 801 into a 801 CS (Cartridge Seal) Pump.

The LMV-801CS can be installed without changing the wet end components

- Eliminates premature failures due to improper installation associated with component seals
- Increased reliability
- 3 cooling options: patented integral cooling coil, external air & water cooling
- Easy upgrade to single, double or tandem 682 API seals
- Ability to go to a standard P Base Motor
- Higher operating capability
- Extended maintenance intervals with API L10 rated bearings
- Improved oil contamination protection with bearing isolators
- ATEX certified
