UNPRECEDENTED RELIABILITY FOR DATA CENTER COOLING SOLUTIONS

Leveraging more than 70 years of magnetic drive know-how, HMD and Ansimag pumps address the critical challenge of efficiently cooling data centers.

Data center cooling requires reliable, leak-free, compact and energy-efficient designs to ensure optimal performance with minimal downtime. The HMD and Ansimag

portfolio includes pumps for single-phase and dual-phase rack cooling from 100kW up to 1.5MW, as well as custom solutions for specific specifications.

3.5X LONGER OPERATION TIMESPAN BETWEEN REPAIR COMPARED TO SEALED PUMPS

KEY HMD AND ANSIMAG ADVANTAGES:

- **Superior Reliability:** 3.5x better MTBF / MTBR compared to sealed pumps meaning fewer repairs, unprecedented uptime and "Five-Nines" availability.
- **Modular, Compact, Scalable:** A design philosophy focused on size and modularity means a compact footprint, component standardization and interchangeability to optimize fit, inventory and delivery.
- **Efficient Operation:** No seals or consumables, along with low energy consumption and low heat generation. Non-metallic containment shell solutions further reduce OPEX.
- **Simplicity:** No need for specialist service teams, as HMD and Ansimag pumps can be maintained or repaired without special tools or advanced training.
- **Safety:** Sealless magnetic drive designs eliminate the risk of fluid leaks, which ensures the protection of employees, equipment and reputations.
- **Global Network:** Manufactured in the USA and UK and stocked at more than 140 locations across 70 countries, HMD and ANSIMAG pumps are readily available.

Honeywell
Sundyne
Aftermarket Services

BACKED BY GLOBAL SUPPORT

Sundyne is more than just a manufacturer of high quality compressors and pumps. We offer some of the fastest delivery times in the industry, and we back each product shipped with a full range of aftermarket support services, extending the value of our highly engineered machines well beyond the point of sale.

And with our engineered solutions, worldwide presence and compact designs, installation and maintenance has never been more efficient.

The Sundyne service team is here to help protect your investment and provide a trouble-free customer experience at every turn. That's **RELIABILITY REALIZED.**

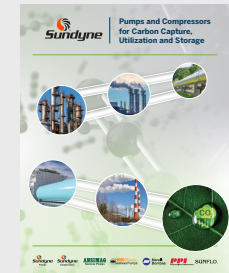

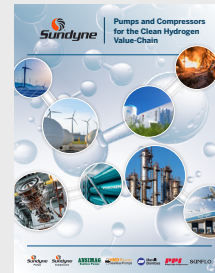

Our Aftermarket Programs Include:

- Gearbox Exchanges & Upgrades
- Maintenance Kits
- Conversion Programs
- On-Site SundSCHOOL
- Field Service Support
- Overhaul and Repair Services
- Site Surveys
- Emergency Expedite Services

For additional information on the HMD and ANSIMAG product lines, please refer to these brochures:

For further information on Sundyne's product fit in Clean Energy Markets, refer to

For more information please visit www.sundyne.com and fill out the Contact Sundyne form. A Sundyne representative will contact you.
